Faridabad, Haryana, India | 8810552513 | jagveerchauhan3766@gmail.com | linkedin.com/in/jagveerchauhan

SUMMARY

Backend Engineer with 4 years of experience building reliable APIs and high-scale backend systems in Python, Node.js, and PHP/Laravel, including sole ownership of a government mobile API platform (500+ app downloads, 8M+ portal visitors) that passed STQC security testing. Cloud-exposed across AWS, Azure, and Google Cloud; skilled in payment gateway integration (Stripe, Razorpay, PhonePe) with idempotent transaction processing, Laravel queue-based asynchronous workflows, and WordPress/plugin security remediation, including a public open-source vulnerability fix. Currently a backend developer at Forvis Mazars, an MNC; previously served as a dedicated engineer for Blueastral's products via Bitstreaks, translating client requirements into POCs for both entities while leading Bitstreaks' internal team of junior developers.

SKILLS

Languages & Frameworks: PHP, Laravel, Node.js, Express.js, JavaScript, jQuery, Python

Databases: MySQL, PostgreSQL (Query Optimization, Indexing)

Cloud & Infrastructure: VM Provisioning & Hosting (AWS EC2, DigitalOcean, Azure, GCP), Basic Linux/Nginx Administration

CMS & E-commerce: WordPress (Custom Theme & Plugin Development), WooCommerce

APIs & Integrations: REST API Development, Webhook Handling, Payment Gateways (Stripe, Razorpay, PhonePe), OAuth 2.0/JWT, OpenAI API, Gemini API

Backend Systems: REST API Design, Asynchronous Workflows (Queues/Background Jobs), Idempotent Transactions, Modular Monolith Architecture, Failure Recovery

AI Tools & Assistants: Claude Code, OpenAI Codex

Practices: Code Review, Technical Mentorship, Security Remediation, Requirement Analysis & POC Development

EXPERIENCE

Software Developer — Forvis Mazars in India | Gurugram | May 2026 – Present

- Full-stack developer (backend-focused) on FMEXA, an in-house HRMS platform covering employee records, leave, and timesheets, extended with project cost and engagement-management features

Senior Backend Developer / Technical Lead — Bitstreaks Technologies | dedicated team for Blueastral LLC, US | Faridabad | April 2024 – May 2026

- Architected a secure digital rights management system using Python (Django) and Django ORM, building reliable RESTful APIs to manage complex business logic for theme license generation, validation, and lifecycle tracking.
- Managed product backend development as a dedicated engineer for Blueastral LLC, while simultaneously leading Bitstreaks' internal junior developer team and translating client requirements into POCs for both companies.
- Built a multi-timezone LMS backend (FullCalendar.js, Stripe, Google/LinkedIn OAuth 2.0) for an Australia-based client
- Removed malware from a production WordPress site twice and migrated hosting; built custom plugins and a from-scratch theme deployed on 10+ sites pre-release
- Engineered secure background jobs and asynchronous workflows for payment integrations (Stripe, Razorpay), ensuring strict failure recovery through idempotency, retries, timeouts, and automated webhook validation.

Software Developer — Onetick Technologies | dedicated team for Protean eGov Technologies Ltd. | Faridabad | August 2022 – April 2024

- Sole backend developer for the Central Board of Film Certification (CBFC) mobile app API (500+ Android downloads) and portal (8M+ visitors, GIGW-certified), a public government platform with periodic high-traffic spikes
- Maintained the API environment on Linux servers, implementing Passport authentication and rate-limiting that contributed to both the API and the portal successfully passing strict STQC government security testing.
- Consolidated architecture by migrating a standalone Node.js file-handling microservice into the core Laravel application to cut cost, latency, and maintenance overhead
- Extended and optimized the existing PostgreSQL database schema for the CBFC platform to support evolving application requirements; built automated bulk certificate generation (Excel import, Laravel queues, QR verification) for an institute ERP, earning a Brilliant Beginner award.

PROJECTS

Central Board of Film Certification (CBFC) — Govt. Mobile App & Portal | PHP, Laravel, REST API, PostgreSQL, MongoDB | 500+ downloads, 8M+ visitors

Sole backend developer for a public government platform; implemented Passport auth, rate limiting, and STQC-certified security hardening across 2 load-balanced servers.

JobIQ — Job Portal for Freshers | Node.js, Express, MongoDB | jobiq.in

Built job-seeker-facing search and filtering, and the recruiter/admin job-posting flow, for a platform connecting students and recruiters.

Live Composer — Open-Source WordPress Page Builder | PHP, WordPress | github.com/live-composer

Led a v2.0 architectural overhaul by engineering a core state-tracking engine and modernizing legacy code for PHP 8+ compliance; fortified security by patching critical DOM-based XSS and PHP Object Injection vulnerabilities while implementing safeguards against recursive infinite loops.

EDUCATION

Master of Computer Applications (MCA), Computer Science — Advanced Institute of Technology & Management, Aurangabad, Tehsil Hodal, Palwal (Aug 2020 – Jul 2022)

Bachelor of Computer Applications (BCA), Computer Science — Aggarwal College, Ballabgarh (Aug 2017 – Jul 2020)
